DETAILED ACTION

Drawings

The drawings are objected to because they are difficult to discern. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

1. Claims 2-20 objected to because of the following informalities: 'characterized' should be spelled 'characterized'. Appropriate correction is required.
2. Claims 5-20 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent

claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. **Claims 1-4** are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Pub. No. 2002/0151770 to *Noll et al.*

As to **Claim 1**, *Noll* discloses a component for arrangement at an implant (See Fig. 10), with: a basic component (30); at least one sensor device (16) arranged in the basic component for the detection of a measurement variable and for generating measuring data for the detected measurement variable [0037]; a telemetry device (88) arranged in the basic component for the transmission and/or reception of data [0040]; and a data transmission connection (60) between the at least one sensor device and the telemetry device for the transmission of data between the at least one sensor device and the telemetry device [0040], whereby the data comprise the measuring data [0044]; where, at the basic component (30), assembly means for the detachable mounting of the basic component in an implant recess of an implant are formed [0063-0064].

As to **Claim 2**, *Noll* discloses a component characterized in that the assembly means comprise an assembly section for the at least partial insertion into the implant recess (48 in Fig. 10 and [0063]).

As to **Claim 3**, *Noll* discloses a component characterized in that, in the zone of the assembly section, a threaded section (42) for screwing in the basic component into the implant recess is formed [0058].

As to **Claim 4**, *Noll* discloses a component characterized in that the basic component has in the longitudinal section an essentially T-shaped cross-section with a head part and a base part (See Fig. 10).
